6. The Future

# Problem

- **Suicide (TW)**
- ***Every 11 minutes***
- **Why?**
- **Increasing annually**
- **Role of Social Media**

## Our Approach

- Using Social Media
- *Instagram Posts*
- Detect Patterns
- Look for emotions + signs of emotion
- AI!

6-13%

of suicide cases can be tracked to Social Media

50,000

deaths annually as of 2023

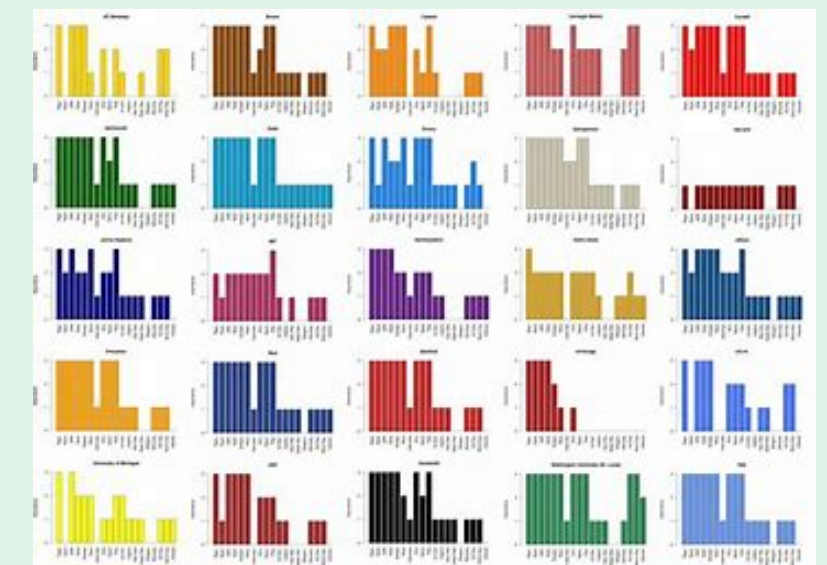

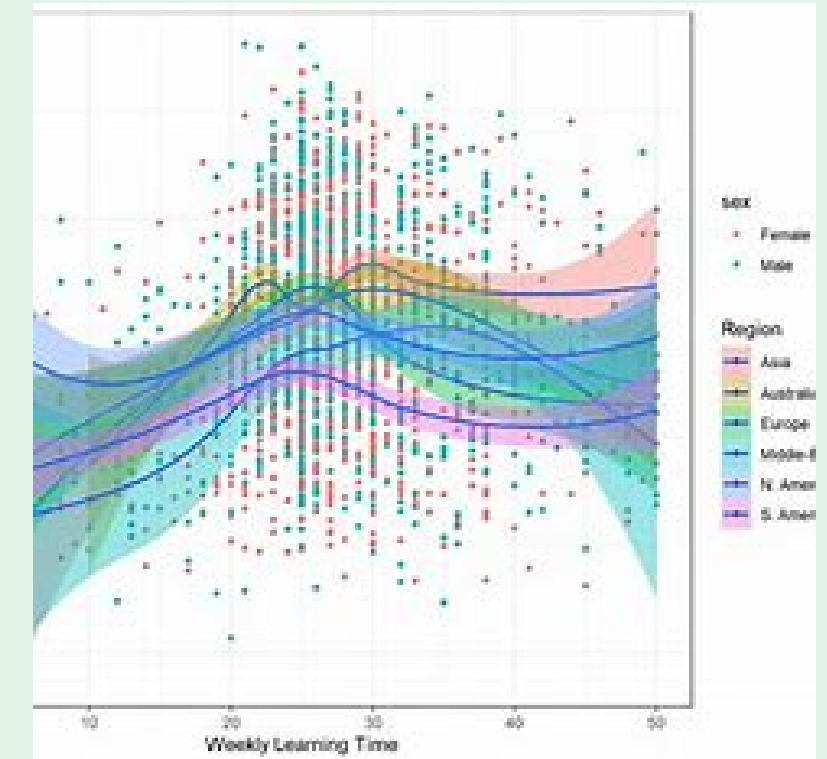

✱ Pioneer Hacks V

# Our Approach - Image Detectio

- We created 2 datasets: one for those pictures that show early signs of suicide and the rest for those that don't
- Next we trained our model with these datasets and curated our own testing sets to get the accuracy of our model.
- We ran multiple iterations (30 epochs on average) to really get our program to be precise!

# IMPLEMENTATION

- USED OPEN CV FOR FACE DETECTION
- Trained a Convolutional Neural Network using Keras API
  - Deep Learning: PROXIMITY
  - SPECIALTY IN FILTERING IMAGES
- Implemented Matplotlib
  - Accuracy!
  - Graph!

# RESULTS & Improvements

- **96% accuracy over a variety of test**
- Demo: [https://colab.research.google.com/drive/1p4InixY\\_iGtfEvr9K9KNzF5EBNMwXW6R?usp=sharing](https://colab.research.google.com/drive/1p4InixY_iGtfEvr9K9KNzF5EBNMwXW6R?usp=sharing)
- Using large data for better machine learning and efficiency.
- Expanding factors that lead to suicide through Social Media( songs, captions, comments, notes).
- Noticing trends in social media posts rather than relying on specificity.

Thank you  
for your time  
and  
consideration!
